BIOFUELS & ADDITIVES FOR THE SHIPPING INDUSTRY

The **shipping industry** faces major challenges in reducing its emissions sustainably while ensuring operational safety and economic efficiency. Liquid drop-in **biofuels** and **innovative additives** offer a promising solution, but their use raises numerous technical, economic, and regulatory questions.

To explore these issues with you, we have launched this **conference** that will provide experts and interested parties with a platform for exchange and discussion.

Contributions from **official authorities**, **fuel providers**, **engine** and **component manufacturers**, and **users** will cover the entire value chain and present practical experiences and the latest developments. Among others, companies such as **Everllence**, **Infineum**, **Finco**, and **Hapag-Lloyd** will present their impressions, experiences, and plans to us.

Join our conference and let's discuss the future of maritime biofuels!
